

THE 15-MINUTE STOREFRONT DEPLOYMENT BLUEPRINT

Thank you for claiming your Automated Headless Storefront template! You have just taken a massive step toward absolute digital ownership. By bypassing clunky web builders and monthly recurring fees, you are launching a lightweight storefront that runs at lightning speed. Follow these 3 simple phases to bring your new storefront to life.

PHASE 1: COPYING YOUR DATABASE SPREADSHEET

We use Airtable as your content management system. It acts as the brain of your website.

1. Create a free account at [Airtable.com](https://airtable.com). 2. Click your purchase blueprint link: [PASTE YOUR SHAREABLE AIRTABLE BASE BLUEPRINT URL HERE] 3. Click "Duplicate Base" in the top-right corner. 4. Select your workspace. You now own the database spreadsheet! 5. Add a test row to your table: - Resource Name: "My First Digital Product" - Category: "Freebie" - Description: "This is a quick test guide." - Access Link: "https://your-payment-or-checkout-link.com" - Status: "Published"

PHASE 2: CONFLICT-FREE TECH PAIRING

Now, we tell your website files where to look for your spreadsheet data. 1. Open your cloned Airtable base in your browser. 2. Look at the URL bar. Copy the string of characters right after "airtable.com/" that starts with "app" (e.g., app2dNCzkf61VdNKA). This is your Base ID. 3. Open "app.js" in a plain text editor. 4. Replace 'YOUR_ACTUAL_BASE_ID_HERE' with your copied Base ID (keep the quotes around it!). 5. Go to [Airtable.com/create/tokens](https://airtable.com/create/tokens) to generate an API key. 6. Click "Create Token", name it "Storefront Read Key", add the scope "data.records:read", and authorize it to access your newly copied base. 7. Click "Create", copy the key that starts with "pat...", and paste it in "app.js" replacing 'PASTE_YOUR_SECRET_TOKEN_HERE'. 8. Save and close "app.js".

PHASE 3: GOING LIVE TO THE WORLD (100% FREE)

To host your storefront online for free with industry-leading speeds, use Vercel: 1. Sign up for a free Hobby account at [Vercel.com](https://vercel.com). 2. Go to your dashboard and navigate to: vercel.com/import/deploy 3. Locate the drag-and-drop box. 4. Select your entire storefront folder containing "index.html", "app.js", "style.css", and "README.md", and drag it directly into the box. 5. Within 10 seconds, Vercel will generate a secure live link for your website! You can customize this link or connect a custom domain for free in Vercel's settings.

HOW TO ADD CONTENT MOVING FORWARD

Whenever you want to add a new digital download, guide, or product to your live site, you never have to touch your website files again. Simply open your Airtable app on your phone or laptop, add a new row to your "Resources" sheet, set the Status to "Published", and refresh your website. Your new product card will display automatically! Need advanced automations, payment integrations, or custom development? Connect with our development lab at AE9-Labs.
